# SYNERGIE\* updates and plan

A. Lasserre-Bigorry & M-F Voidrot Météo-France

\*Météo-France Operational forecasting tool

### Plan

- Background
- New data ingested
- New functionalities
- Major new developments
- Conclusion

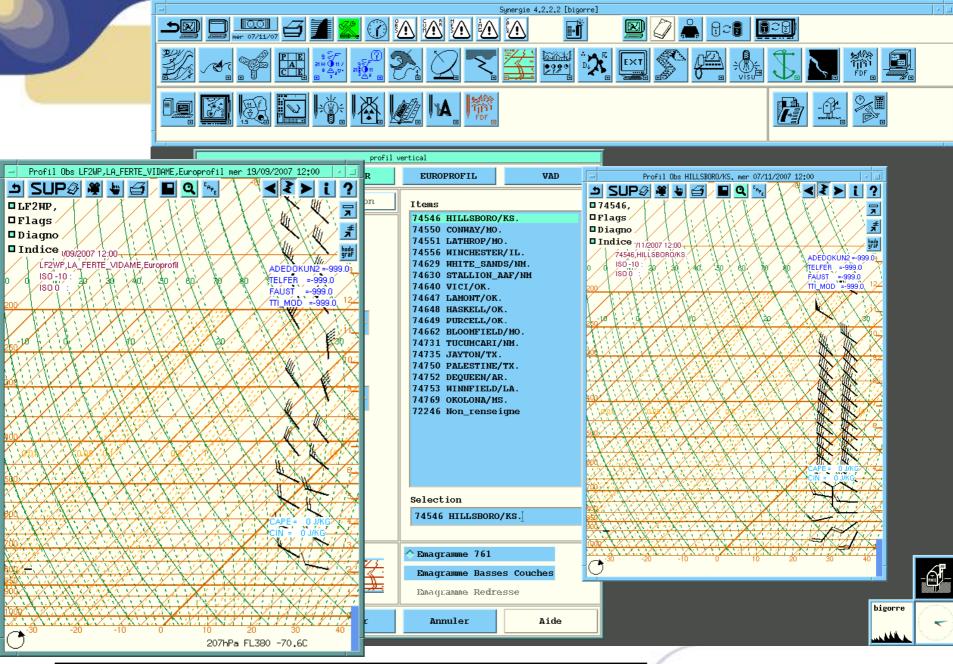

- Synergie has been the operational forecaster tool since 1993.
- The operational version or French forecasters is Synergie 4.2 :
  - Visualisation of all available data (model, observation, radar, lightning, satellite, objects from WAFS, fronts, RDT, …)
  - Superposition and animation
  - Cross section on 3D data
  - Production of objects (fronts, ANASYG, SIGWX)
  - Production of maps and charts, and Symposium.
  - Modification of PV to re-run model (TSR)
  - Macro or short cuts.
  - Batch production
- Synergie 4.3 version is under development.

# New data ingested in 2 years

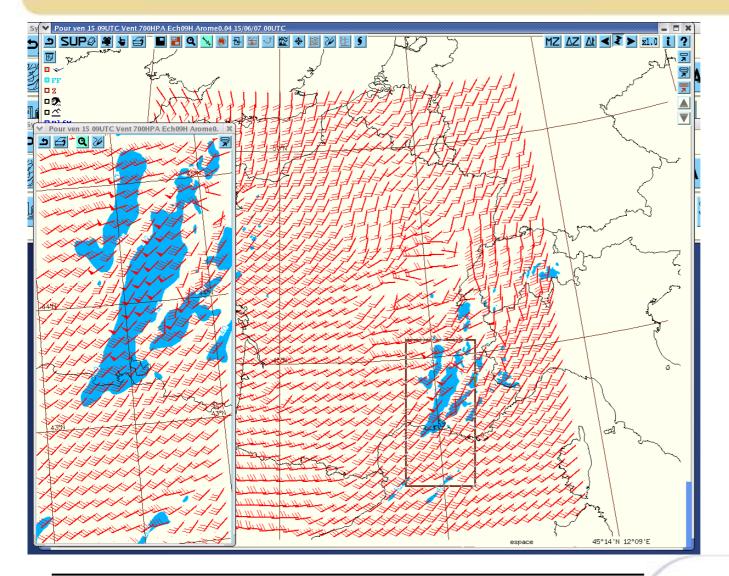

- Profilers and dropsonde data
- Fine Mesh model AROME
- High resolution US SST 1/12°
- Envisat 10M wind forces and waves height
- Jason wind forces and waves height
- METOP, ERS AND QUISCKAT Ascat Combination
- METOP data : cloud classification
- Bollene AND Nimes 3D radars
- New hourly rain analysis (Antilope)
- Surge model and water level watch over ports
- Long distance UK lightning network
- Fog synthetic diagnostic (Caribou)

#### Fine Mesh model AROME

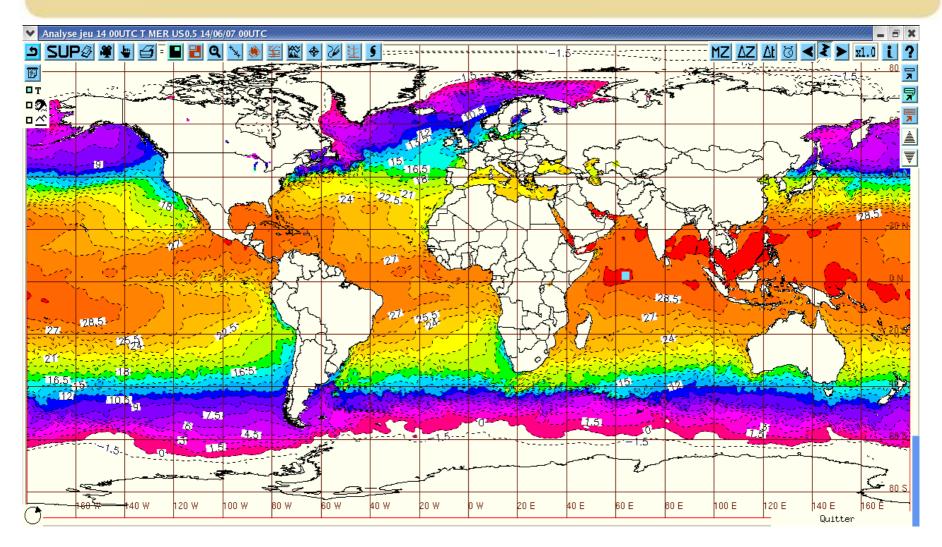

In operational mid- 2008

Mesh 2.5 km

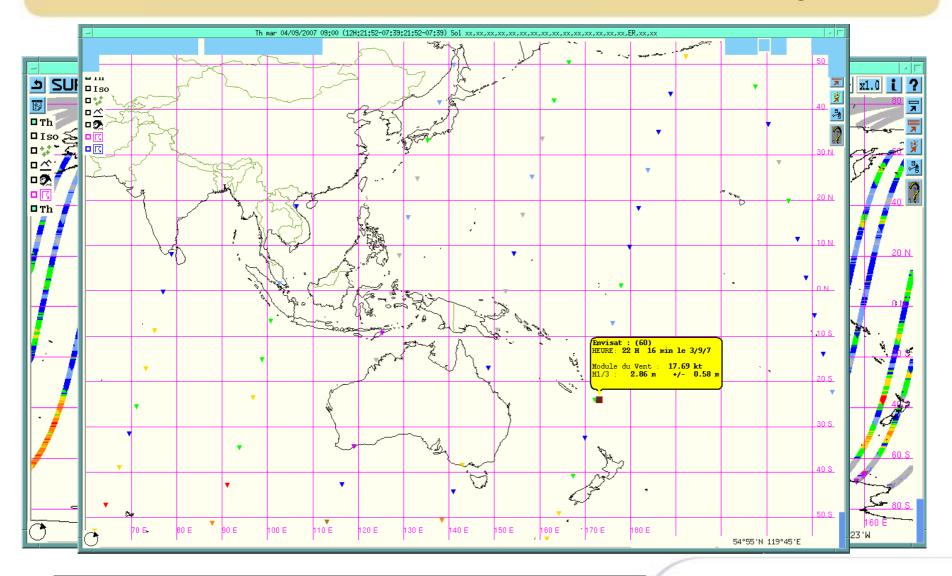

#### US SST 1/12°

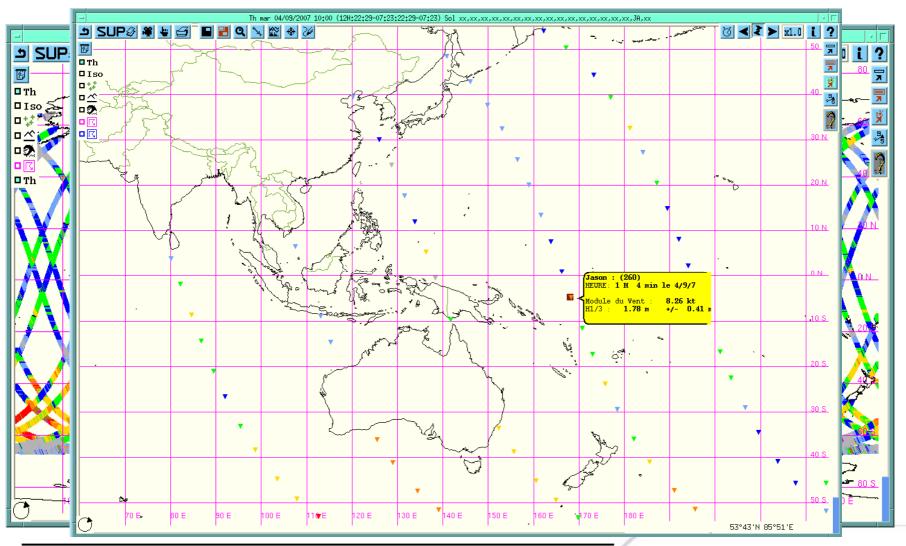

### Envisat 10M wind forces and waves height

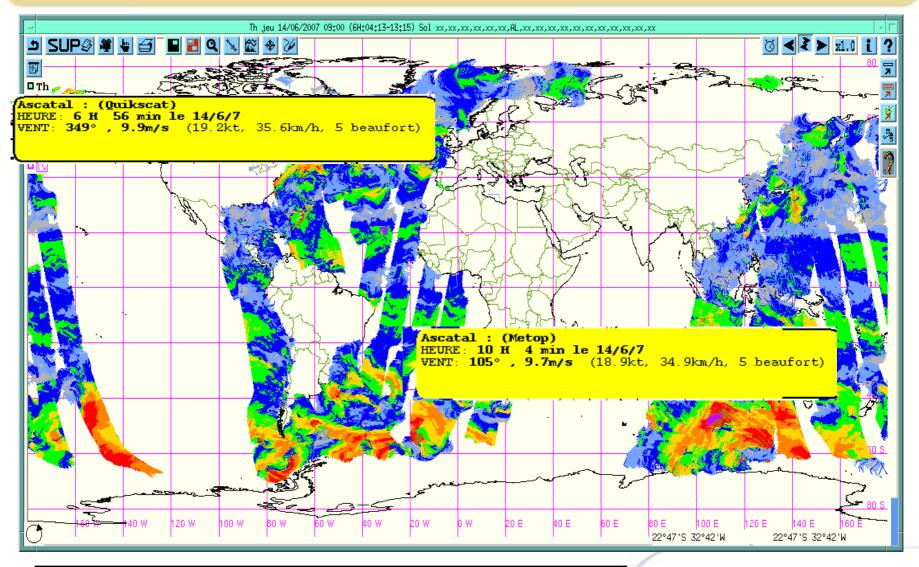

### Jason wind forces and waves height

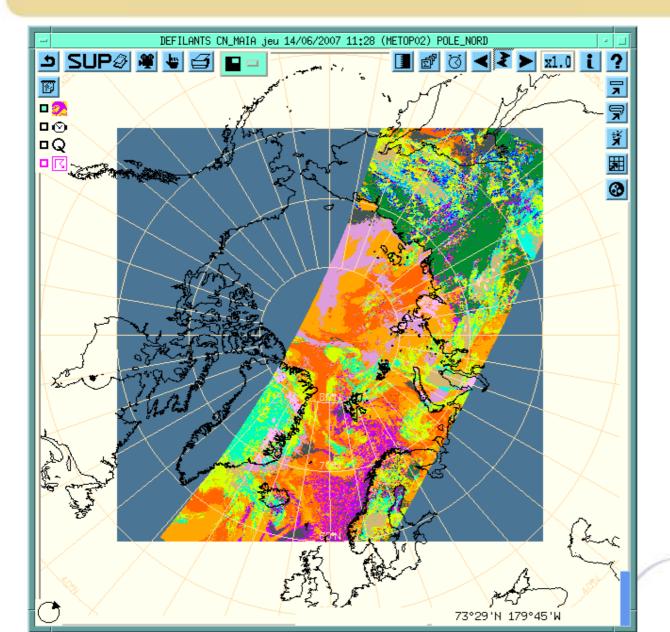

### Metop, ERS, Quikscat: Ascat Combination

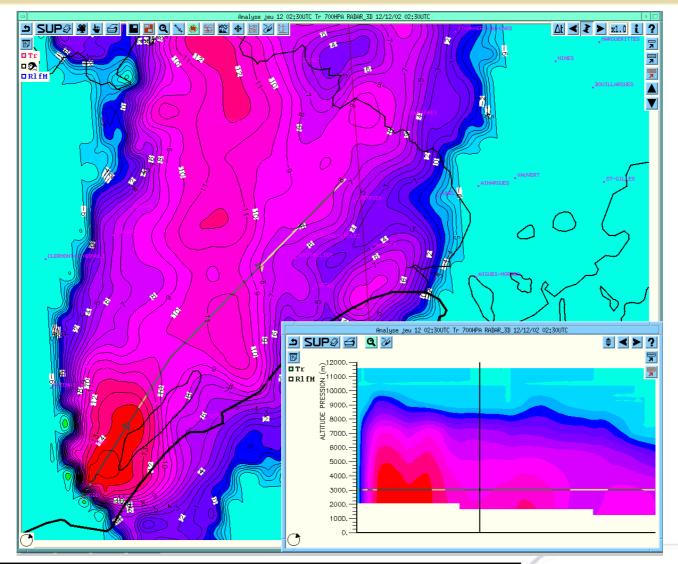

#### METOP data : cloud classification

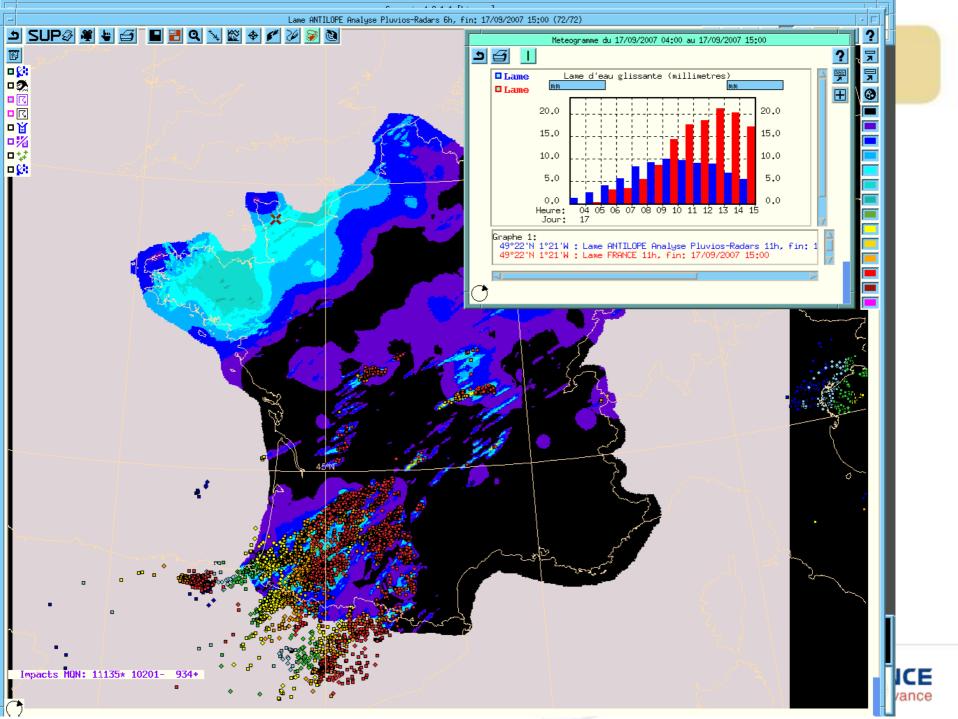

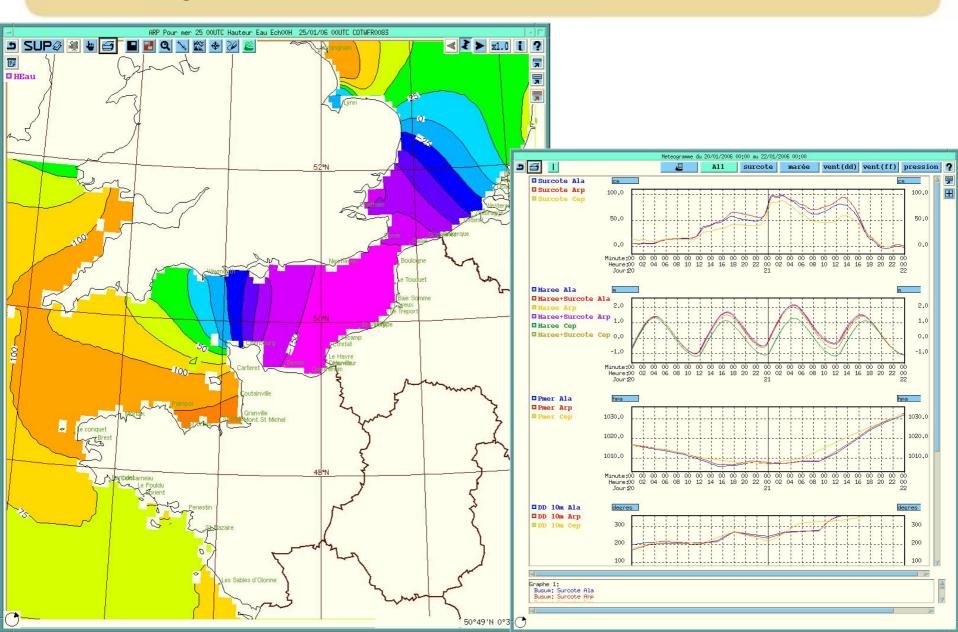

### **Bollene AND Nimes 3D radars**

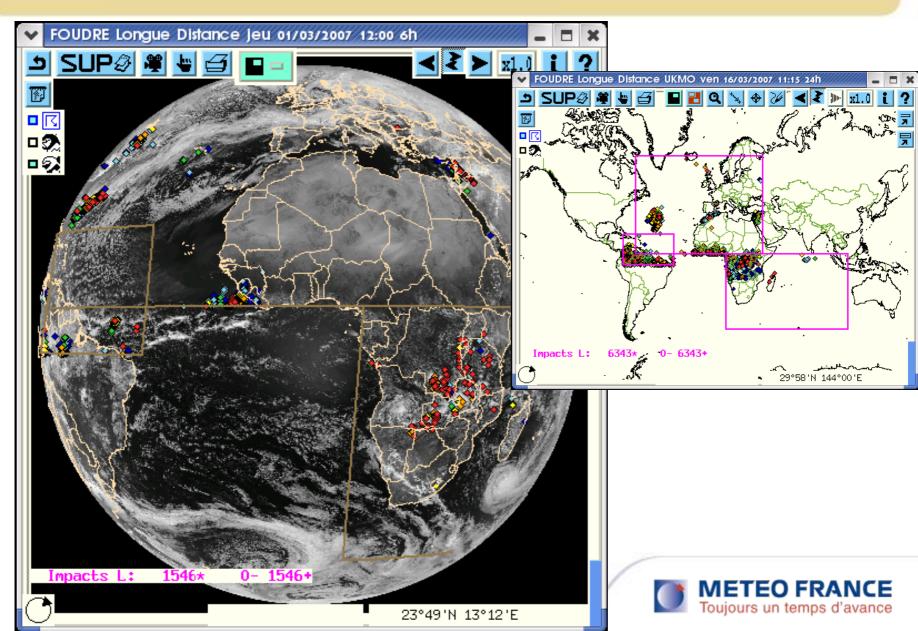

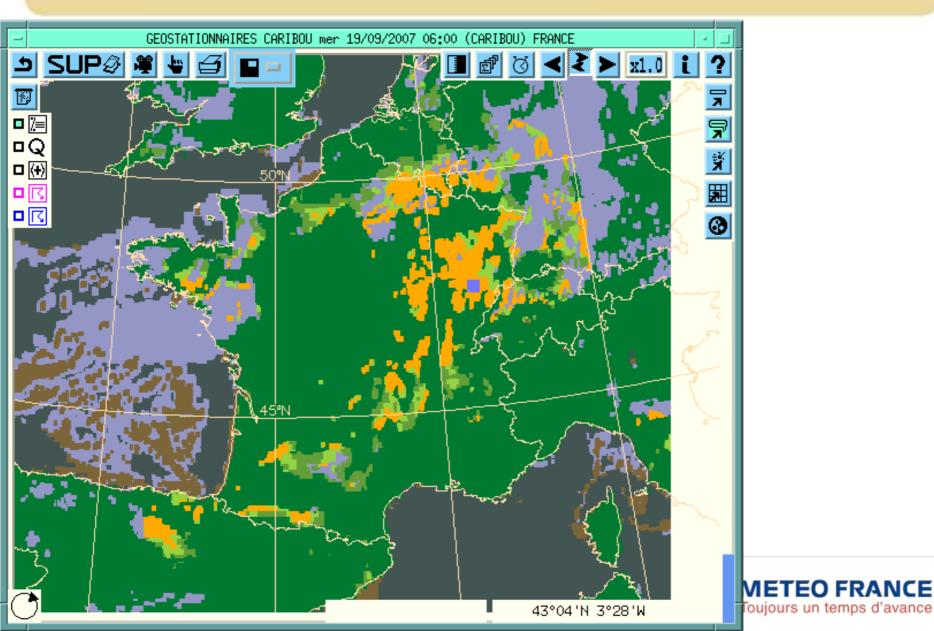

#### Surge model and water level watch over ports

### Long distance Lightning UK network

### Fog synthetic diagnostic (Caribou)

# New functionalities

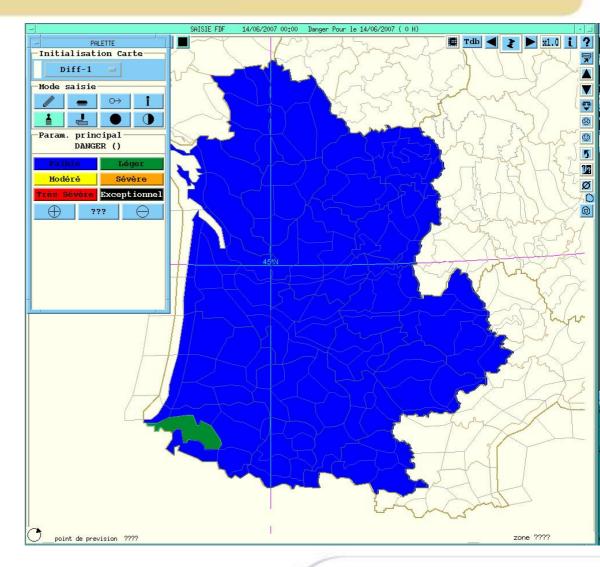

- New modules :
  - Surges
  - Forest Fire risk index
- Models visualisation :
  - Improvement of Wave models
  - Cross section export
  - Multi trajectories
- Satellite images : Improvement of animation
- Radar images :
  - visualisation of extrapolated images
  - New virap visualisation
  - Calculation of accumulated images improved
  - Color set
- Observations
  - Ships or Buoys Trajectories
  - Min-Max visualisation
- Animation capture

### New module: Forest risk index

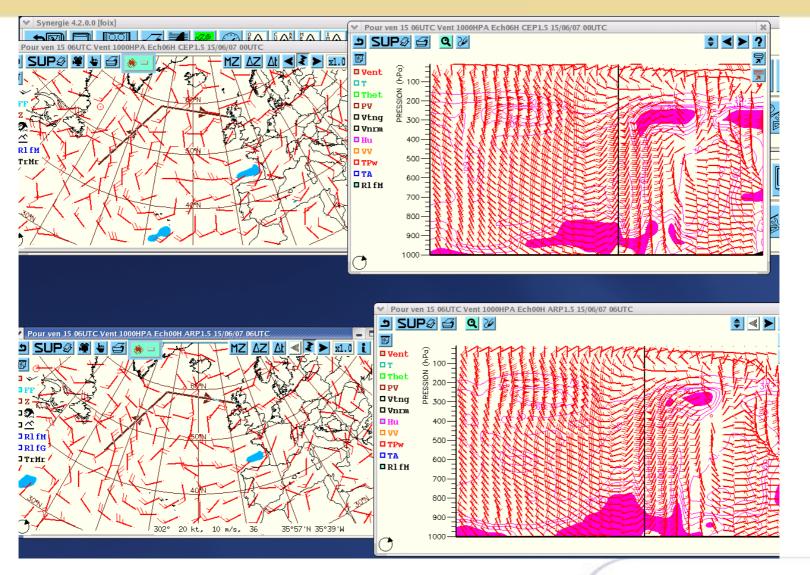

Production module

But low risk during last spring ;-)

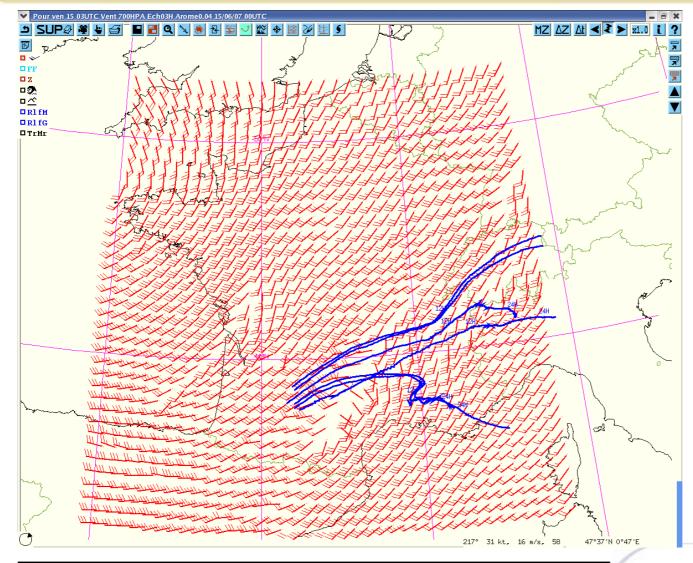

#### Model : Cross section export

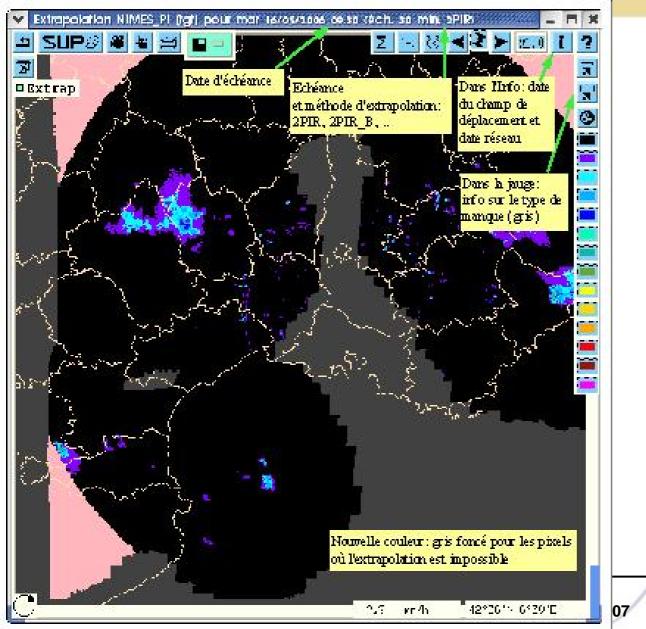

#### Model : Multi trajectories

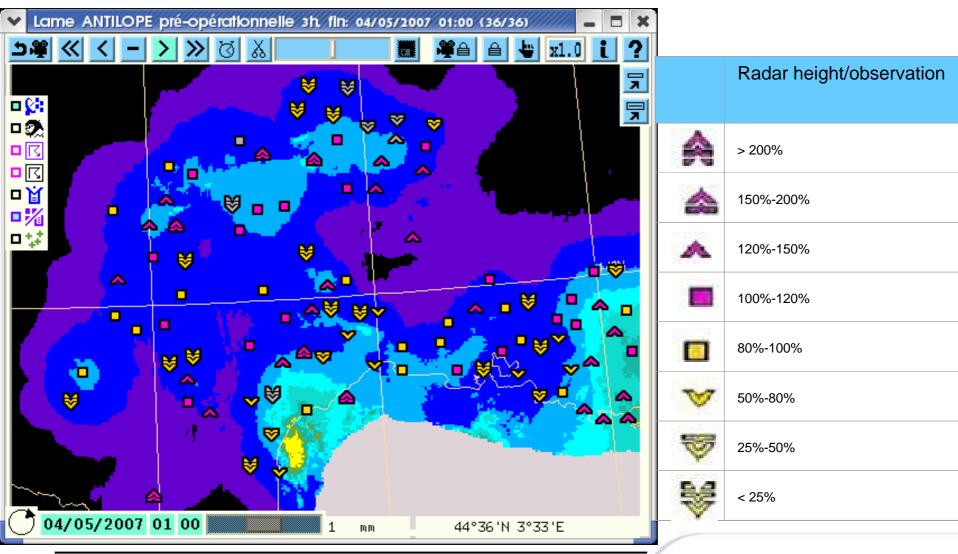

#### Radar: extrapolation

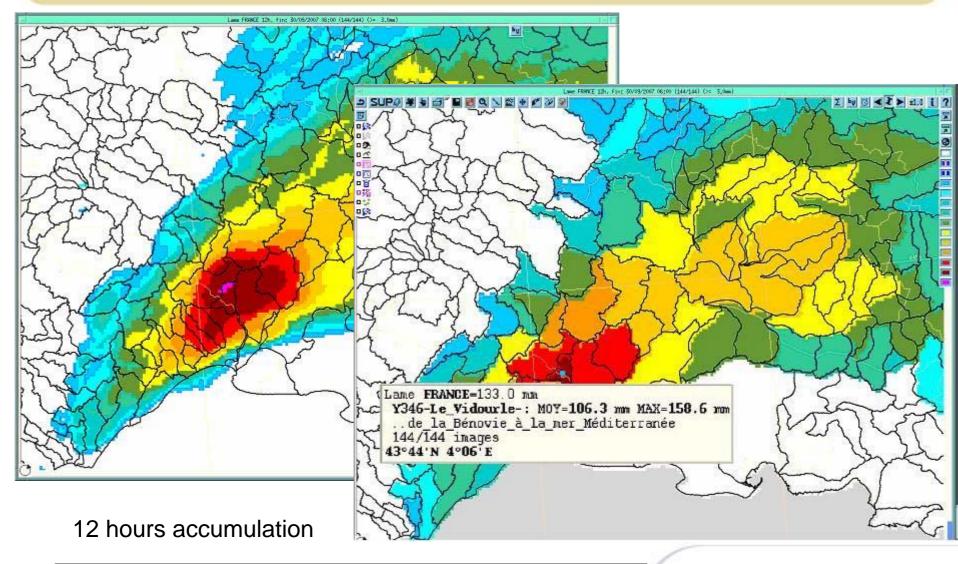

#### Radar: virap

Synergie Updates and plans – 14 Nov 2007- A. Lasserre-Bigorry ECMWF 11<sup>th</sup> Workshop on Meteorological Operational Systems - Nov 2007

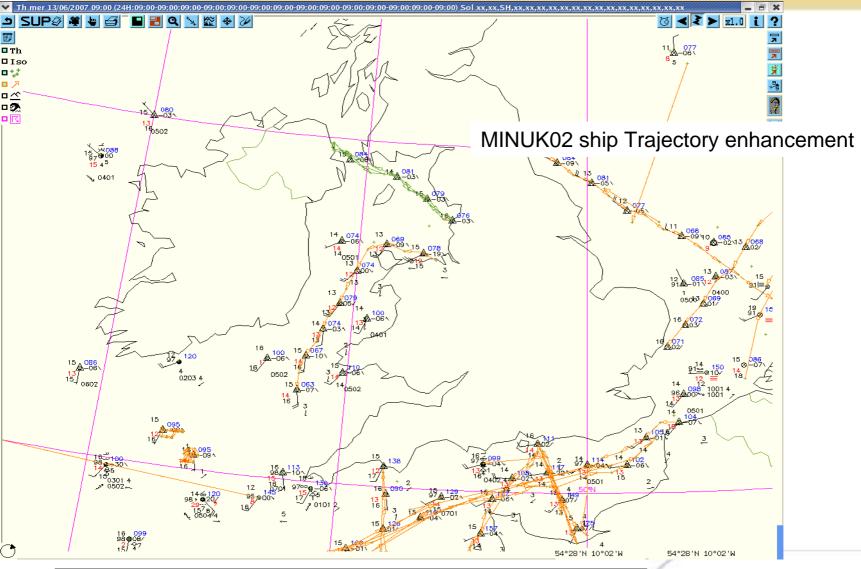

#### Radar: rain on catchments areas

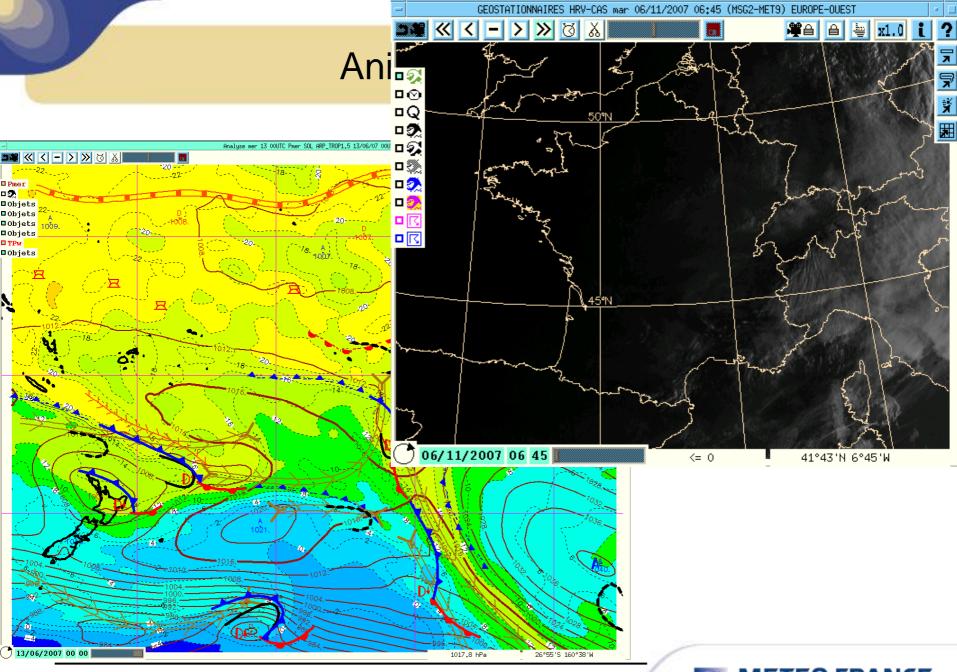

#### **Observation:** Ship or boy trajectories

# Major new development for 4.3 and after

- Functionalities and Data aspects:
  - Oceanographic data : Calypso project with French Navy
  - Surge check along an estuary
  - Nowcasting Objects and other data animation
  - New Visualisation for 3D radar observations
  - Symposium 2
- Technical aspects:
  - Move Data Base from Oracle to PostgreSQL
  - Migration of Synergie on SOA (Service Oriented Architecture) step by step, by developing Web Services (WMS).
  - Test feasibility of integration Magics++

Examples of project relying on the last SYNERGIE V4.1 Calypso Calypso

- Extension of Synergie to oceanology
- Capacity of Synergie functions to be adapted to new scientific field

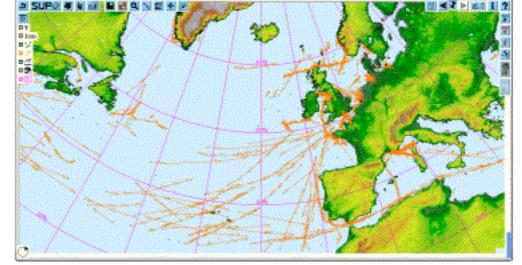

#### Plotting parameters:

- Temperature
- Salinity

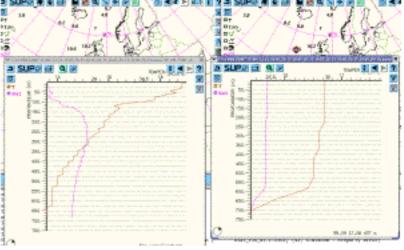

...

٠.

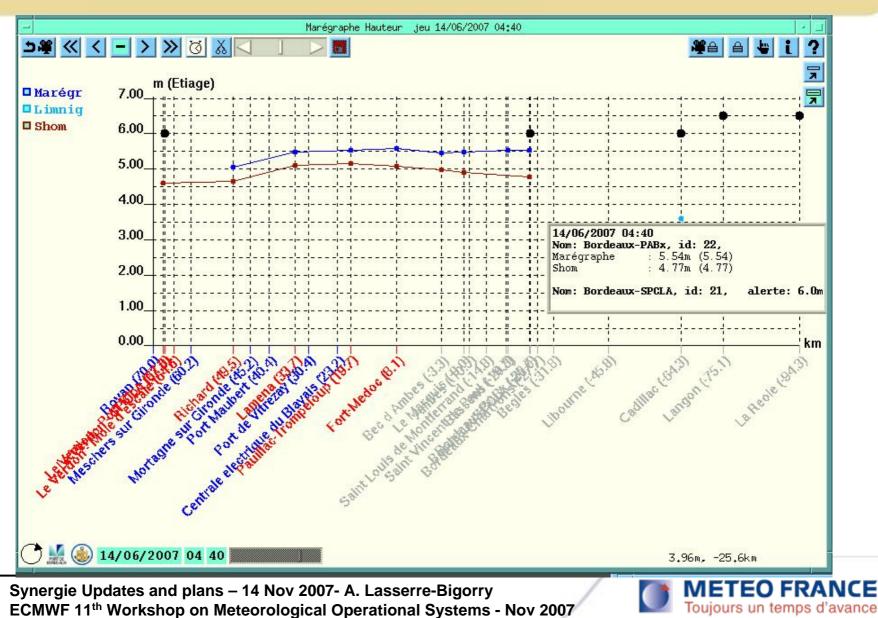

Mixing layer

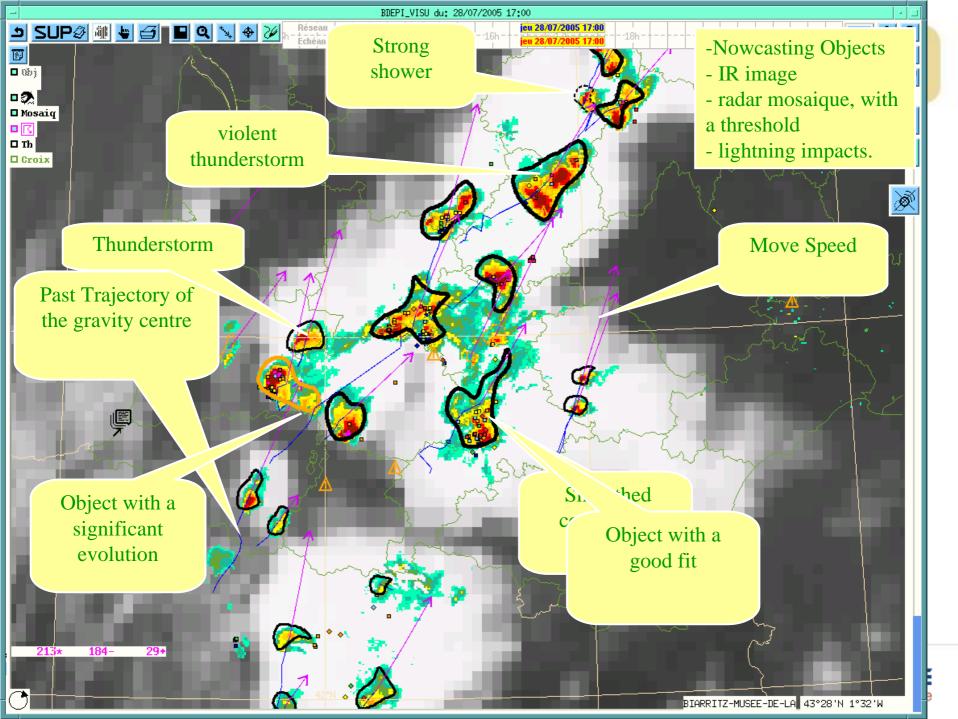

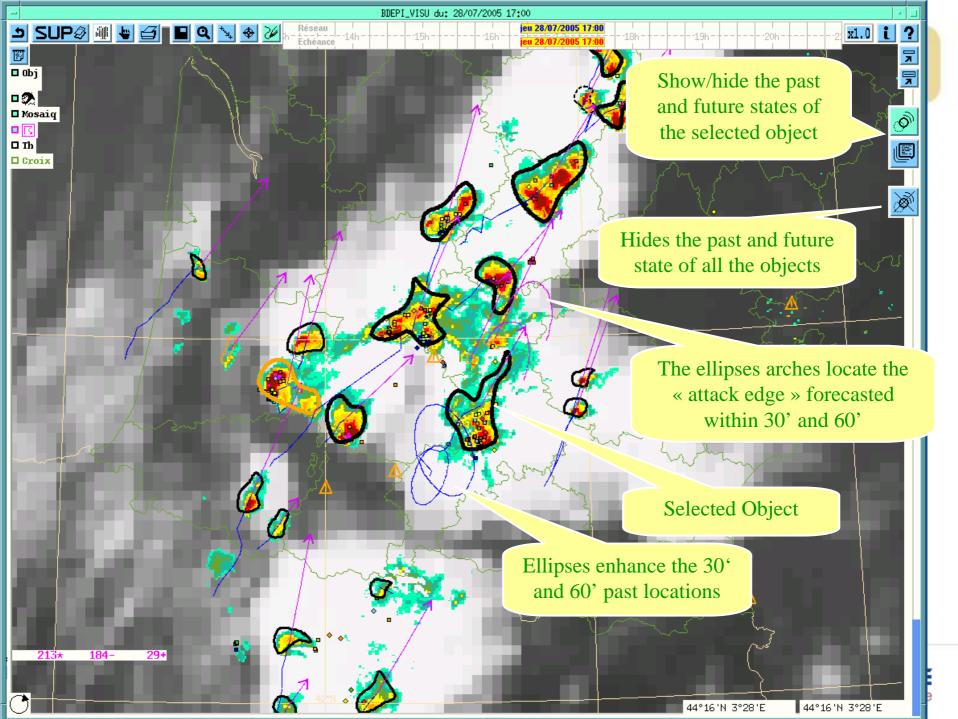

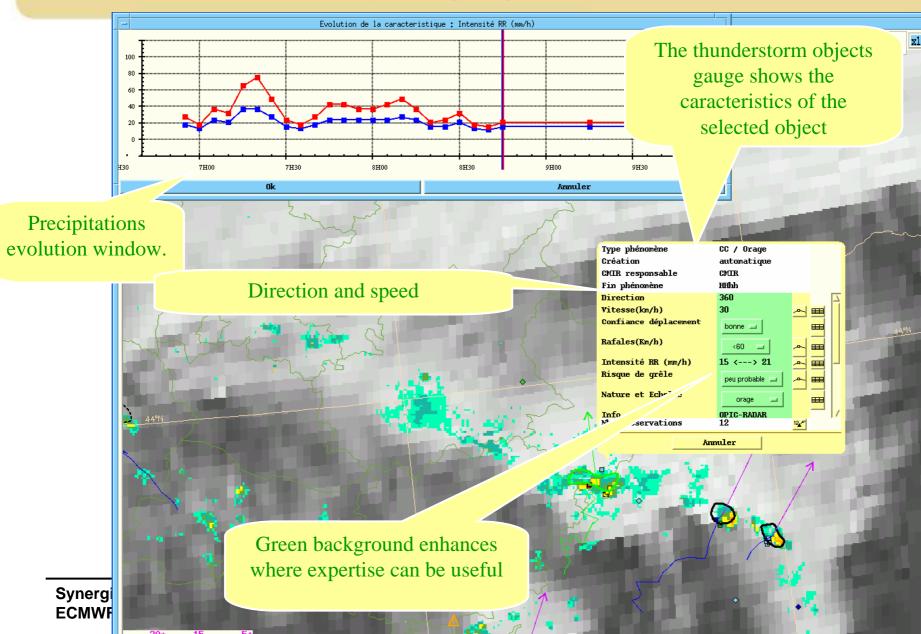

#### Surge check along an estuary

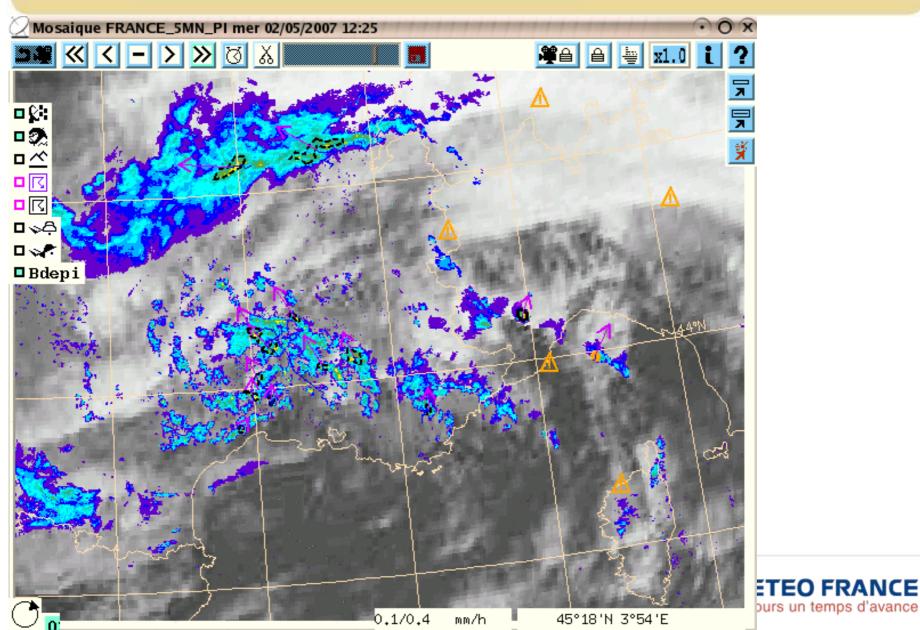

#### Thunderstorm objects gauges and evolution curve

### Nowcasting objects and animation

# Conclusion

- Synergies 4.2
  - Visualisation of New set of data
  - Introduction of new functionalities
  - New production modules
- Synergie 4.3 and after ....
  - More data from observation systems
  - New 3D radar module
  - Service oriented architecture and new GUI possibilities.

#### .... SYNERGIE 5.0

Thank you for your attention Any Question ?
