# COPERNICUS Climate Change service - C3S

- The European Commission has **entrusted** ECMWF with the implementation of the **Copernicus Climate Change Service – C3S**
- The Copernicus Climate Change service will provide **information** to increase the **knowledge** base to support **adaptation** and **mitigation** policies.

Climate Change

# C3S in a nutshell

International expert panel

from European commission e.g., FP7 Space call, H2020

from EU Member States, ESA, EUMETSAT, EEA, WMO..

Evaluation & QC function

Quality assurance  
Integrity of Service  
User requirements

Climate Data Store

Sectoral Information System

Outreach & Dissemination

Stakeholders & users

Climate

## Climate Data Store - CDS

- The **Climate Data Store** will be at the heart of the C3S infrastructure and will provide information about **past, present** and **future** climate in terms of **Essential Climate Variables** and **derived climate indicators**
- The CDS will be designed as a **distributed system**, providing improved access to **existing datasets** through a **unified web interface**
- The CDS will contain **observations**, global and regional **climate reanalyses**, global and regional **climate projections** and **seasonal forecasts**
- The CDS will also provide an **authoritative set of software (toolbox)** that will allow the users to **develop applications** that will make use of the content of the CDS
- This service will accommodate the needs of the highly **diverse set of users** that will include **policy makers**, experts as well as **scientists**

Climate Change

# Climate Data Store content

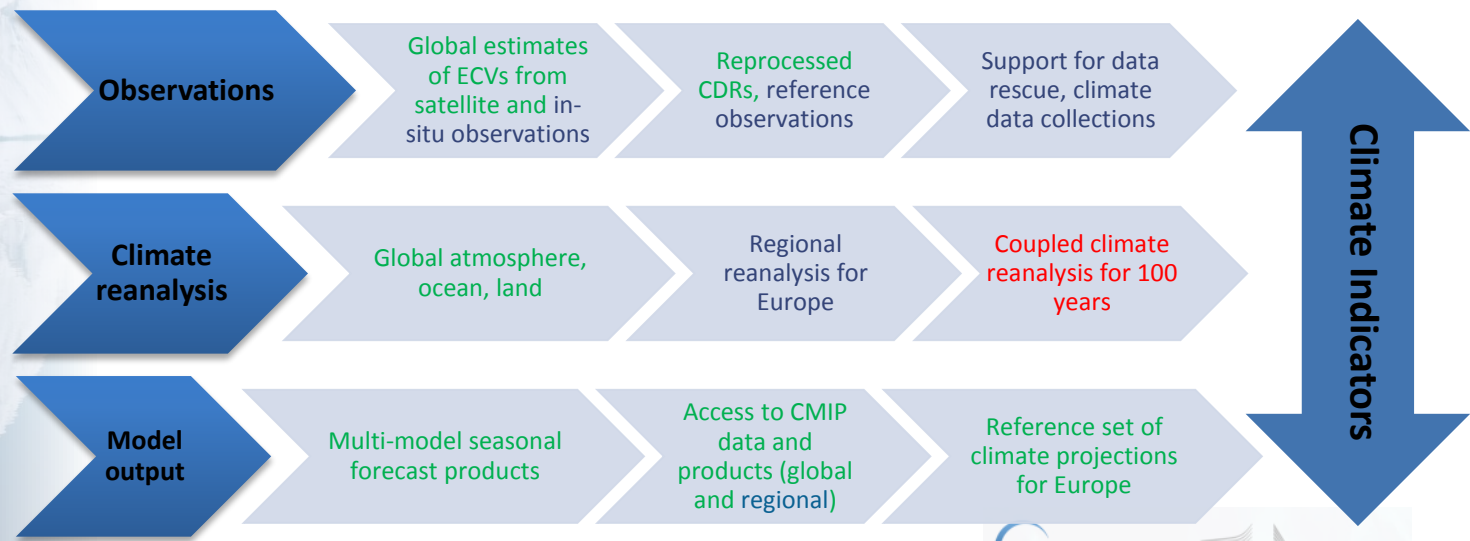

## Scientific basis:

- Essential Climate Variables as defined by GCOS
- GCOS Status Report and Implementation Plan
- IPCC, CMIP

**Action engaged**

**In preparation (PIN or ITT out)**

**Not started**

Climate

# Climate Data Store Infrastructure and toolbox

Climate Change

# CDS Architecture

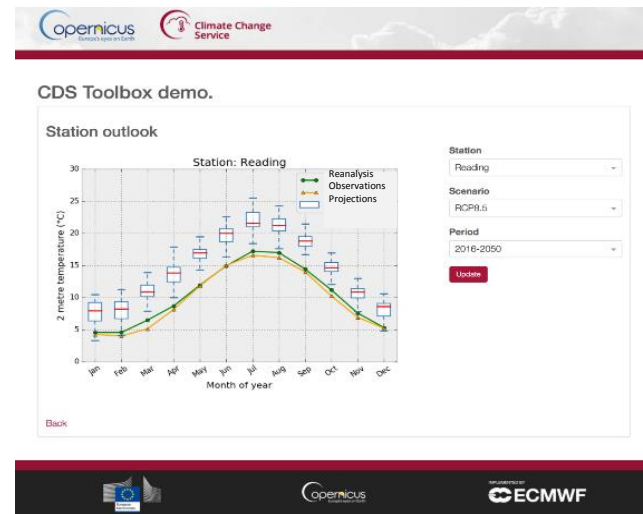

Climate  
Change

# CDS infrastructure and toolbox: Challenges

- **Diversity** of users
- **Diversity** of data sets
- Very **large** data volumes
- **Distributed** Data Sources
- **Interoperability, Standard Compliance**
- Need for **interactivity**
- **Friendly Front-end, robust Back-end.**
- **User-defined** workflows
- **Variety** of presentation methods
- **Access** via API
- **User** management
- **Performance** monitoring
- System **Scalability**
- **Evolving** requirements, adaptability

Climate  
Change

# CDS infrastructure and toolbox

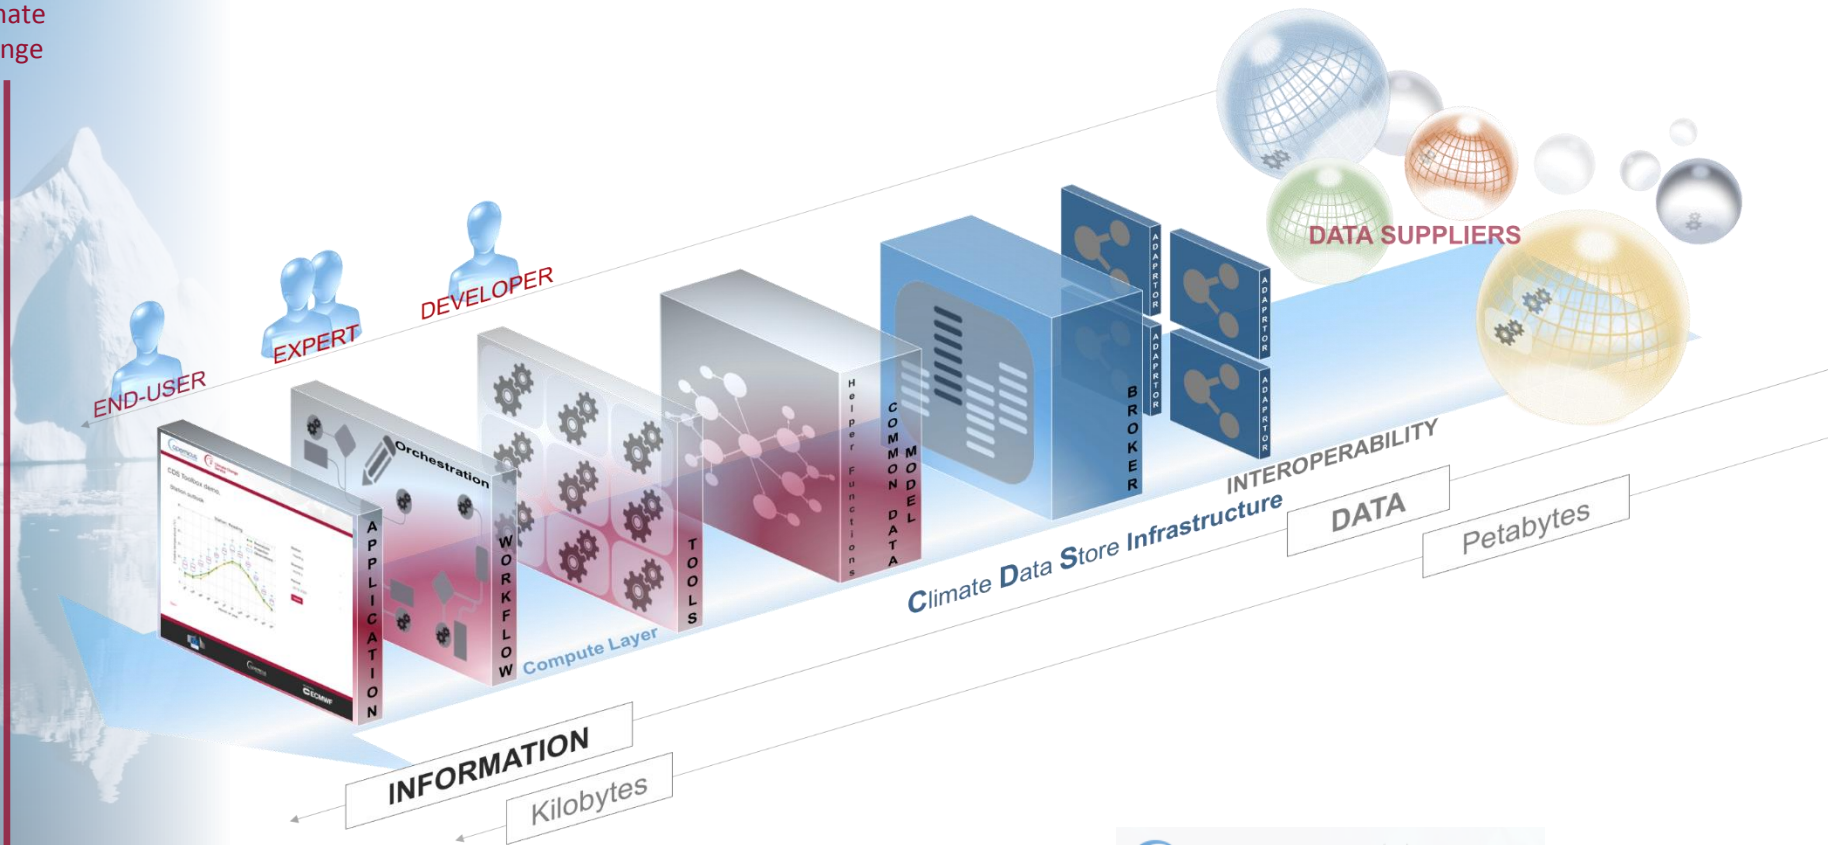

The **Toolbox** will be composed of:

- **Tools** that perform basic operations on data, such as the computation of statistics, sub-setting, averaging, value at points, etc.
- **Workflows** that combine tools by chaining them so that the output of some tools is used as input to others
- **Applications** that make use of workflows and selected data and products of the CDS, to build interactive web-pages allowing end-users to interact with the CDS
- **A Toolbox Compute layer:**
  - When possible tools will be executed next to the data (at the data suppliers)
  - Otherwise, computations will be performed in a dedicated compute layer
  - Use of cloud technologies
  - Compute layer will also hold intermediate results

# What do we mean by Data?

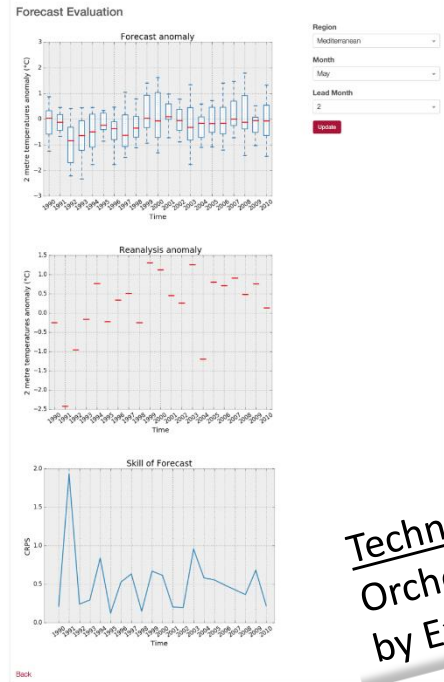

# CDS toolbox: Application workflows

CDS Toolbox demo.

CDS Toolbox demo.

**Technical Concept:**  
Orchestrated Python workflows written by Experts

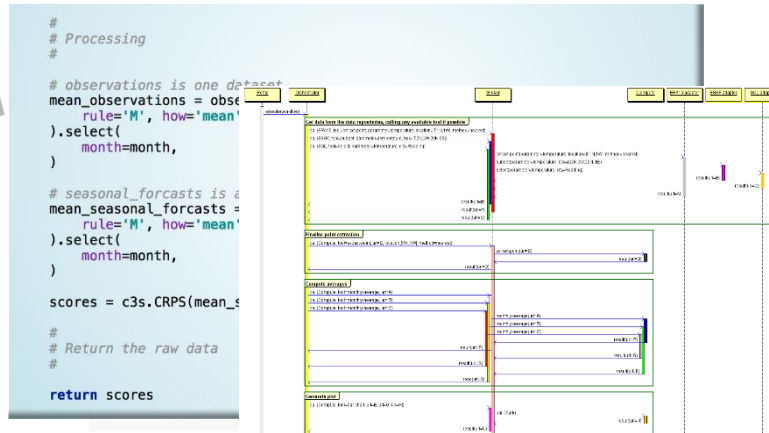

## Workflow code 1/2

```
def CRPS(month_name, lead_time_month=2, variable_name='T2m'):
    month = month_names.index(month_name) # month index starting from 1

    # CDS queries
    observations = c3s.queryDataset(
        name='OBSERVATIONS'
    ).timeFilter(
        time_interval=('1990-01-01', '2010.12.31')
    ).spatialFilter(
        bbox=(9, 38, 17, 45) # Italy
    )

    lead_month = (month - lead_time_month) * 12 + 1 # NOTE: month start form 1
    seasonal_forecasts = c3s.queryEnsemble(
        name='SEASONAL_FORECASTS'
    ).ensembleFilter(
        lead_month=lead_month,
        lead_year=[*range(1990, 2011)]
    ).spatialFilter(
        same_as_observations, # requests same bbox and same coordinate system and spacing
        how='average', # assuming observations is lower resolution
    )

    [...]
```

# CDS toolbox: Application framework

## Surface air temperature

▶ 2:26 / 2:26

**Technical Concept:**  
Easy JavaScript framework to  
implement customized  
applications

## JavaScript application code

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <title>Evaluation of fitness for purpose of the Sectoral Information System</title>
    <script src="c3s.js"></script>
  </head>
  <body>
    <h1>Evaluation of fitness for purpose of the Sectoral Information System</h1>
    <p>Parameters: lead time month 2, variable: 2m temperature, time period 1990-2010</p>
    <div id="may_plot"></div>
    <table id="may_table">
    </table>
    <script>
      var CRPSService = c3s.service({
        user: "alexamici",
        password: "secret",
        workflow: "CRPS"
      });

      var may_crps = CRPSService.query({month: "May"});

      c3s.table_component({
        renderTo: 'may_table',
        data: may_crps
      });

      c3s.plot_component({
        renderTo: 'may_plot',
        data: may_crps
      });
    </script>
  </body>
</html>
```
